MYRNA

Gladiolus

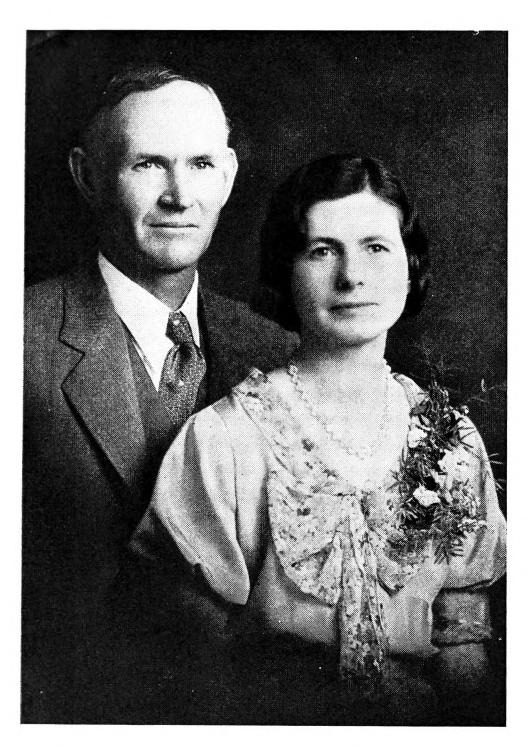

by Pruitt

SEASON

940

D.S. Pruitt

Box 402 Eugene, Oregon

Greetings

E WISH all our customers and friends the best of everything for the new year just starting. We are doing our best to please each and every customer. However, many disappointments may be expected in course of twelve months. Taking events as they come we feel thankful for the many fine things that came our way last year and hope as many more pleasant things come our way again in 1940.

We had the pleasure of growing many new varieties of glads the past summer. Will say the improvement is very gratifying, and we wonder what will come out next season.

The picture above we are using to show what we think is possible to produce in the ruffled gladiolus.

We do not want any one to get excited about this new seedling, as it is only in the making, having bloomed the second time last summer. Like many world beaters it may never reach the name list. It is a seedling from Picardy and New Era. A very rich pink, even richer than New Era, with a wonderful sheen. Together with its size and ruffling makes it beyond any doubt the most beautiful glad we have ever seen.

We must not be selfish, and will say that other new varieties we grew were just grand. As in the wonderful Sensation, Algonquin, Peggy Lou, Aladdin, King Lear, Flora Farmer, Beautiful Dream, North Wind, Miss America, Grand Opera, Candy Heart, Helen of Troy, and many others.

Other recent introductions that are getting down in price in reach of us all are as follows: Margaret Beaton, a very lovely white with strawberry throat.

Coral Glow, by Merton G. Ellis, was again a wonderful glad with us.

Beacon another grand one in the light red class,

Zuni and Jalua in the smoky class were good. Rima in the light lavender and Bluet, something new in the blues, were very fine.

Diane, something new in the orange class, is a very worthwhile new one.

I have found that buying new varieties, though they may seem high, is a sound investment if handled properly. Buy a few of the best and see what great progress is being attained in the greatest of all outdoor grown flowers—the gladiolus.

MR. AND MRS. D. S. PRUITT.

Pruitt's Ruffled Gladiolus

The longer I grow Glads the more I am learning to love the ruffled varieties. When my seedlings are blooming for the first time I look them over carefully each morning to see what has opened. I can scarcely see the plain petaled ones until the ruffled ones are carefully examined.

Using only the best of the ruffled ones for seed, I notice they are coming more ruffled each year.

The one illustrated here is my latest achievement. It is more ruffled than any other gladiolus I have ever seen. Now it has neither name nor number, but if it performs as well in 1940 as it did in 1939, you will learn more about it in my next catalog.

Prices

Prices herein are prepaid to you. Where priced by ten or the dozen, one hundred will be seven times the ten rate.

Twenty-five per cent with order will hold for further orders.

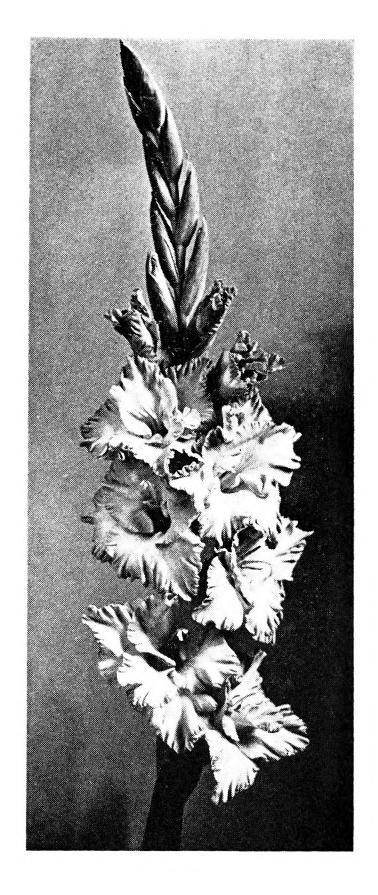

No orders filled for less than \$1.00.

Will be pleased to quote special thousand lot price not prepaid upon request, if same is in commercial quantity.

Planting

A great deal has been said as to the best way to plant. In fact, that subject

has just about been covered. One thing I would like to impress on the minds of all growers. This I have learned by experience. We do not plant our large bulbs deep enough. We throw out a furrow with a hoe or plow and it leaves a bank of dirt on each side that makes it appear we are planting deep enough. Just place a large bulb in one of such trenches and level off the ground. Then dig down to the bulb and see how near it is to the surface. Be careful or you will rake it out. A number two and larger bulb should be 4 to 7 inches below the ground level. This will not give you so many bulblets but will hold the temperature down in the warm part of the day and prevent stem crooks. Like many other plants the gladiolus makes all or most of its growth at night. When a vigorous plant begins making bloom stem above the leaves it grows very fast and is very tender in the morning. Then comes the terrible heat of the day. The ground is heated at the surface and the plant wilts. Over goes the tender stem. The following night it tries to straighten itself up but is unable to do so completely. This is called stem weakness. This fact I am not denying; only giving this as a remedy. Try it and see if it is worth while. Do not use much barnyard manure. If so, place it on the ground in the fall and let the winter weather leach it into the ground.

QUEEN MARILYNN, GRANTS PASS, OREGON, GLADIOLUS SHOW, 1939.

Our 1940 Introductions

In releasing three new seedlings, we wish to say they have been under observation for four years and should be well established. With us they are very outstanding in their respective classes. All of them multiply fast enough to become a commercial and are healthy bulbs. It is with much hesitation that we release a new seedling, no matter how good the performance.

In going to the various parts of the world with varying climates and latitudes much difference in performance may be expected. Especially the first and even the second and third years.

Some new ones will perform great most anywhere grown, the first year. Others will not. However, any one who feels they are not satisfied with any new variety we release may exchange it for any bulbs we list.

Queen Marilynn

We named this lovely variety for the little lady who was deservedly chosen queen of the gladiolus show at Grants Pass, Ore., last summer.

The way in which she performed her part, in awarding the seventeen or more fine loving cups to the winners, will long be remembered by all who had the pleasure of witnessing the event.

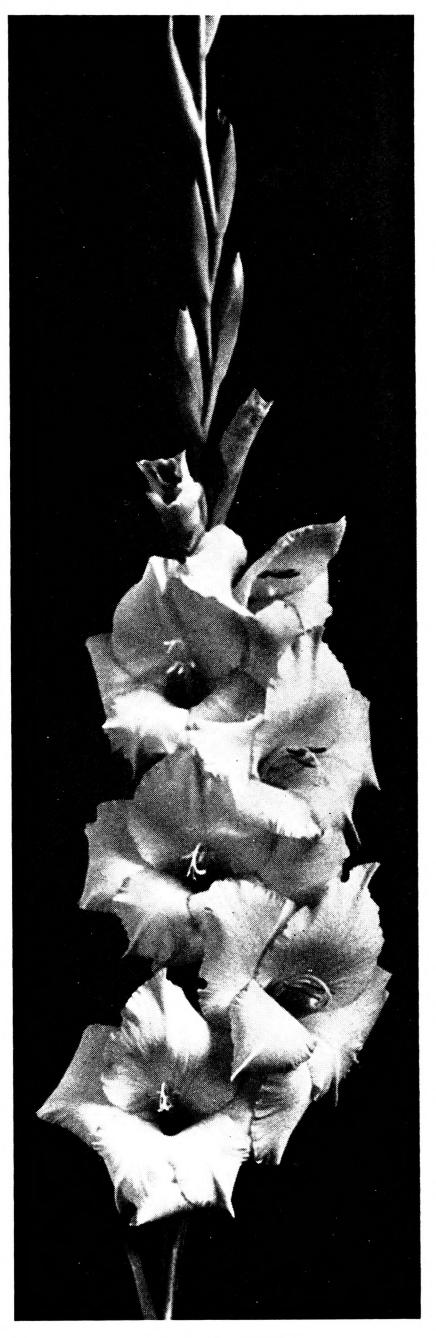

Marilynn Sherlock, Grants Pass, Ore., gave us her consent to use her name and picture which is here shown.

Queen Marilynn is a lovely new creation as it performs with us. When first seen its name was to be Pruitt's Triumph. But it developed such wonderful delicacy we decided it should have a feminine name.

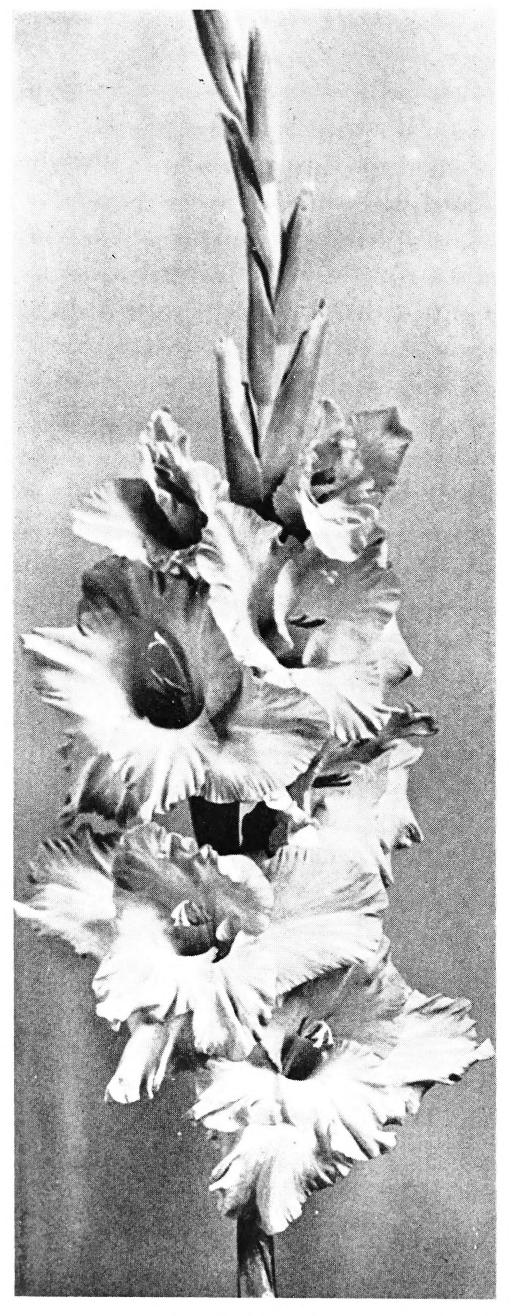

A large clean cut, recurved flower on a very slender, wiry stem. One which you want to run to get near when seen among other glads. A light shell pink with lovely cream throat. A pencil stripe sometimes circling the cream throat of a richer pink.

5

Ruffled Princess

A beautifully ruffled variety. Almost as ruffled as the seedling shown on page 2. In color it is just a trace lighter than New Era, although no relation to New Era that we know of.

A large exhibition flower, six and sometimes more open at one time. Not a tall grower but a very fine keeper when cut.

Those who wish to get some fine ruffled seedlings will be delighted in the results from it.

Myrna

Introduced last year, has given excellent account of itself in many parts of the country. It was awarded a first class certificate by the Maryland trial gardens. Was winner of grand champion spike at the Havre de Grace show, displayed by William C. Coakley. Was winner in many other shows too numerous to mention. Myrna is one of those exceptional performers, not found in many varieties. We take this opportunity to thank our customers who bought Myrna and other varieties of our introduction, for the many fine letters and pictures sent us. We were so busy with our work in the bulbs and flowers we failed to answer all the letters written us. But we want to assure everyone we fully appreciate them all. The price is more reasonable this year and we hope many more growers give it a trial. The bulblets we will send out this year will be large and should about all grow and make fine bulbs and increase. They often bloom if not grown too far north.

Lord Selkirk

(By J. Twomey)

Lord Selkirk was the great sensation last year. We have not grown it but it has been well praised by many who know fine glads. A large pure white from Maid of Orleans and Queen Mary.

Mr. Twomey visited us for a short stay early in January and we believe he has some fine varieties and more that will be heard from in the near future.

Aragon

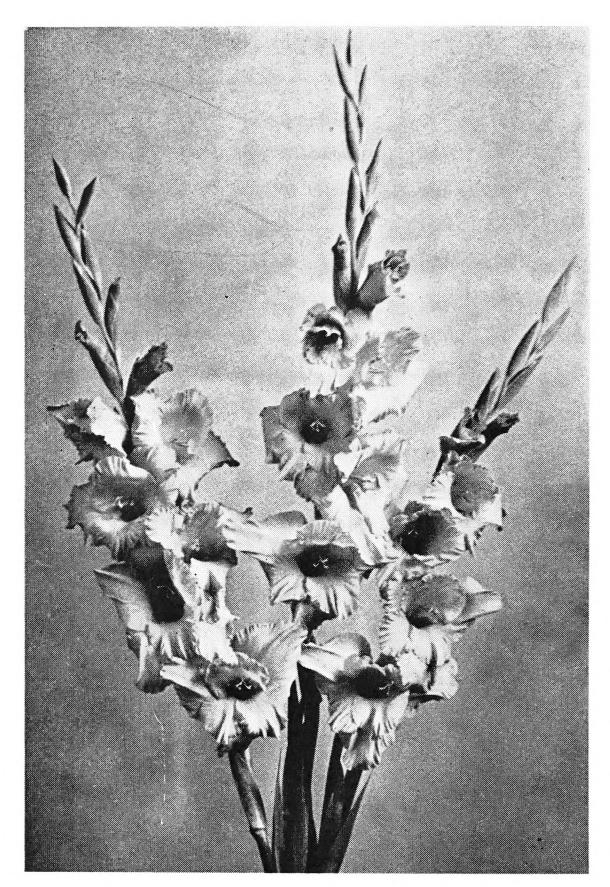

Another of Mr. Twomey's originations we have not yet seen, but from the picture and his description of it, we feel sure it is a wonderful new glad. A pink seedling from Picardy and Miss New Zealand.

From this cross we can easily imagine a glad of huge size and without the coarseness of Miss New Zealand. Leave it to Picardy to add beauty to its offspring.

ARAGON

DONNA

Donna

The picture of this seedling was used to featured the ruffled glad in our last year's catalog. It is a seedling from Wasaga and Shirley Temple. A more beautiful color could scarcely be imagined. An orange buff or might be called an apricot, almost a self color. It is a decorative in size. As a cut flower Donna will keep with the best of them. For ruffled beauty it is great.

Owing to the fair stock we have we consider the price we are asking for the above variety is in reach of all. If you don't feel like investing in the large bulbs try a smaller one or even bulblets which will readily grow for you if given a chance, without soaking or cracking.

Each	10	100	1000

Medium	6.00		
Small	5.00		
Bulblets	1.75	\$10.00	\$80.00

Leona

(Pruitt)

A most beautiful rich rose red, carrying six to eight fine ruffled blooms open on a tall slim wiry spike that never crooks under normal growing conditions. This variety has been greatly admired by everyone who has seen it. Was first seedling the summer of 1937 at the Havre de Grace Gladiolus show.

It makes ample bulblets that grow readily. Together with Ellen Marie and Valeria it has been bloomed four times, assuring a well established variety and giving us enough stock of each to enable us to make the low price we are releasing them at.

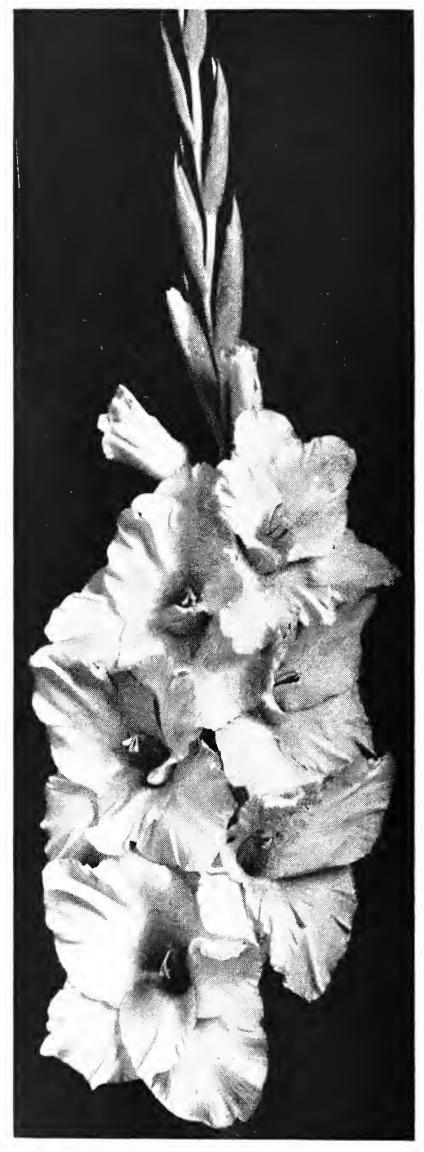

Please note the reasonable price we ask for the bulblets and small bulbs. Also the quantity reduction, giving those who buy it an opportunity to get a good start at a reasonable price.

Read carefully our guarantee on these three outstanding varieties in another place in this catalogue.

SHIRLEY TEMPLE

Shirley Temple

Shirley Temple gained in popularity the past summer. Despite its temperamental habit it is selling in great quantity for a new variety. Try the smaller bulbs if you live in a real hot summer part of the country. This will bring your blooms after the heat wave is past and you will be surprised what fine flowers you can get from small bulbs and sometimes fine flowers from large bulblets.

Shirley Temple won many awards at the various shows over the country last summer. At one of the New York shows it was grand champion spike of the show. Exhibited and grown by Mr. W. M. Anderson of Millbrook, New York. Thanks to Mr. Anderson. Wish him the best for the coming season.

Leona, Ellen Marie and Valeria, our 1938 releases have been very favorably received and many fine letters came in praise of them.

The price is the same on Ellen Marie, Leona and Shirley Temple.

Valeria

Seedling No. 38-34

(Pruitt)

I am sure this lovely flower has a great future both as a commercial and exhibition. Pronounced by one prominent grower as a perfect glad. Was given an award of merit at the Maryland trial gardens the past summer. Has given good account of itself everywhere grown, even standing up under the terrific heat and dry weather experienced the past two or three years in parts of the east. It is a true rival of the great Dr. Bennett, but much better in every way. Never crooks for me and scarcely ever has a flower out of place. Carries five to seven large ruffled flowers open at a time. Of fine substance and keeping quality. Has been called a pink by some but if it is a pink it is so pink it is red. A very soft red with a narrow mark of light cream in the throat.

Do not miss getting started this year with this one.

Ellen Marie

Seedling No. 49-34

(By D. S. Pruitt)

One of our new introductions for 1938. Named for my wife. This is a wonderful glad. Very large and beautifully ruffled. In color it is grand; hard to describe. I will say a very rich salmon pink, with light buff throat mark. Almost a self color without flecking. Early bloomer, growing medium high. Stiff wiry stem that never crooks, but the flowers are so large and heavy it will bend the plant over if planted shallow in loose ground, as all large bulbs should be planted much deeper than most people plant them. I will say be sure and get them 5 or 6 inches under the level surface of the ground, not 5 or 6 inches under the top of the ridge thrown up in making the furrow and covering. This beautiful new variety has been bloomed four times the same as the other two new ones I am releasing along with it, making sure it is well established. Get started now and grow up with it.

Sensation (Marshall). A late tall rose with lighter throat. Ruffled flowers of good size. 1	$\frac{3.00}{24.00}$	$\frac{2.00}{16.00}$	$\frac{1.00}{8.00}$.60 per 1 4.50 per 10
Tall vigorous plant	.10	.06	.03	.35 per 100
Giant growth	.80	.50	.25	.35 per 100
rich orange red throat blotches. One of the most striking of the newer glads	.60	.40	.25	.10 per 25
 sometimes flaked darker. A little inclined to be soft but can be very nice	.50	.25	.15	.15 per 3
Beautifully lightly frilled edges to each petal. From six to ten good sized blooms open, well 1	.30	.20	.10	.25 per 10
faced on good spikes 10	2.40	1.60	.80	1.50 per 100

Our 1939 planting of Minuet. Notice the uniform growth and development of the plants.

Overhead irrigation and Oregon sunshine help to grow Pruitt's superior gladiolus bulbs.
